Research Interest

I am broadly interested in large language models. In particular, I am interested in model architecture (model depth, looped models). In the meantime, I care about LLM security, especially the potential threats that frontier LLMs may pose to society.

Education

Simon Fraser University — Vancouver, Canada
Ph.D. in Computer Science — 2025 - Present
- Advisor: Dr. Linyi Li
- Research area: Large Reasoning Models and Trustworthy AI

Simon Fraser University — Vancouver, Canada
M.Sc. in Computer Science — 2022 - 2024

The Chinese University of Hong Kong, Shenzhen — Shenzhen, China
B.Sc. in Mathematics — 2018 - 2022

Publications

Internships

RBC Borealis | Vancouver, Canada — 2026.01 – 2026.09
- Proposed an adaptive supervision method for tiny recursive reasoning models that supervises only the answer positions supported by the model's current reasoning state, reducing supervision noise and improving training efficiency and effectiveness on puzzle reasoning benchmarks such as Sudoku-Extreme and Maze-Hard (under review).

SAP Canada Inc. | Vancouver, Canada — 2024.09 – 2025.08
- Post-trained 8B-parameter language models (SFT, LoRA, DPO, GRPO) for software license-permission extraction and classification.
- Developed a Retrieval-Augmented Generation (RAG) system using LangGraph, fully integrated with SAP AI Core for domain-specific retrieval.
- Improved structured output reliability by transitioning from JSON prompting to function-calling with Pydantic, reducing schema violations and hallucinations.
- Deployed 4-bit and 8-bit quantized models with Ollama on GPU (GCP) and CPU to support lightweight demos.

Hanglok-Tech | Shenzhen, China — 2023.07 – 2023.09
- Improved robotic control performance in Panda-Gym using DDPG (Stable Baselines3).
- Applied GAIL in Isaac Gym for real-time humanoid motion imitation.
